Vue générale

Caractéristiques principales

Ergonomic

Specially designed for improved handling and greater comfort during work. Suited for both right and left-handers due to its symmetrical shape.

Flexibility

Just a few seconds are sufficient to accurately adjust the lanyard to the perfect work positioning point. The unique design of its curved cam means the tensioner slides along the rope smoothly and in a controlled fashion.

An economical system

It is possible for the user to replace the rope quickly and simply, in complete safety (on the condition they have been trained in the use of PPE). It is therefore no longer necessary to change the entire system when only the rope is worn.

Ultra-resistant

Rope that lasts double the length of time: intensive tests against abrasion (5,000 cycles, or the equivalent of one year's daily use) showed our new polyamide braided rope is twice as resistant compared to ordinary rope. A removable textile sheath is available to further protect the rope against rubbing on harsh surfaces.

More than 20 product combinations

This work positioning system for work at height enables the length of the rope and type of karabiner to be adapted according to the work carried out.
