

Duo Soft - The nitrile sole with a tread

With Duo Soft outer sole technology, two high quality materials are combined in a practical way: a nitrile outer sole for high resistance to chemicals, cutting and damage by shavings and swarf and a shock absorbing comfort midsole made of polyurethane. The outer sole has a 4.5 mm large studded tread and is extremely wear-resistant, oil,

acid and petrol resistant and heat-resistant up to 220°C. The Duo Soft sole is also superlight and highly elastic and gives effective protection to the spine, ligaments and joints thanks to its integrated cushioning system and provides optimum comfort in wear.
