

**USE :**

Earthing and short-circuiting on low voltage cabinets is required after the voltage detection if :

- There is a risk of voltage presence from the primary source or a replacement source (storage battery, generator, etc.)
- there is induced voltage.
- there is presence of capacitors or very long cable (several tens of meters)

FEATURES :

- Icc : 4 kA/1s.
- IEC 61230 standard.

COMPOSITION :

Quantity	Designation
1	Earthing device cable 16 mm ² 5 branches. Earthing length : 2,5m
5	Crocodile clamp
1	Plastic case
1	Notice
